## From where the refugees receive water?

---

A large number of refugees left their country because of the wars that are led there – like Syria, Iran, Iraq and many others . They run into different countries, but often don't stay in one for a long time. They want to go to a country, which is well-developed economically and politically.

Bulgaria also accepts refugees. Many of them cause troubles and problems, but there are good ones, who only want to live in peace. From where the refugees in Bulgaria receive water? Since the beginning of the year, over 11,000 refugees have arrived here, most of them Syrian. Many of them prefer to go to Germany because of the good conditions that are offered there. One of the main tasks of the countries is to ensure a pleasant stay for these foreigners. Not all of the refugees go to a nice camp. Most of them fall into poorly maintained premises without food, water and heating. But some fall into well maintained housing. They have a constantly-assured hot meal, a laundry room, all are healthy, and hygiene is at a very high level. Many refugee children study in a Bulgarian school too.

Bulgarians receive water from different mineral springs. Our country is a true natural paradise, because people, animals and plants here can feel the curative power of all the mineral water species known in the world. Since ancient times the healing and spiritual power of the water has been well known in our lands. The natural mineral springs such as Serdika (today Sofia), Pautalia (Kyustendil), Germanea (Sapareva Banya), Augusta Trayana (Stara Zagora), Medius (Sandanski) were known and used. The water from these springs goes to treatment plants. There it goes through filters to be purified. After long purification processes, the water reaches homes or goes to factories to be bottled. In the way of logic, refugees who stay in Bulgaria, use the water from our springs. It is true that many Bulgarians and refugees don't get any water, especially clean and drinkable. Few of them, lucky enough to get water, think it is very tasty. Like every country, ours also have places, where the water is dirty and inappropriate for drinking and bathing. We work on this problem and we do all we can to solve it. One day all of our water will be clean and ready for using from the people.
