

Report about emigrants and their water resources

1. Methods

I made a dialog with Kalina Yotova – elder expert „Links with the public” at National agency of emigrants.

And there is the interview which we made through e-mail:

Petya (I): .Which is the closest refugee center around Sofia?

Mrs Yotova: On the territory of Sofia National agency for emigrants next to Council of Ministers has registration and acceptance center which has hospices in 4 neighborhoods: „Ovcha Kupel” , „Voenna Rampa” , Vrajdebna” and „Busmanci”

Petya (I): Information about the number of emigrants?

Mrs Yotova: Until 19.06.2017 number of accommodated people in Sofia is 1030.

Petya (I): What is environment where they live?

Mrs Yotova: Bulgaria, like a part from European Union according to European legislation, guarantees good sanitary-household conditions, medical care, and social and culture adaptation for these people who are searching for international help.

Petya (I): They have water which they use for cleaning, cooking, drinking, etc. From where?

Mrs Yotova: Each family in the hospices has its own room. Accommodated people in the hospices has free access to plumbing system and sanitary rooms. Water in the hospices which are located in Sofia is delivered by „Sofian water” and is suitable for drinking. Water supply to the centers is the same like to the others customers of the company.

Petya (I): What are the properties of water which they receive? Have it got any detrimental properties?

Mrs Yotova: You can talk with the people in „Sofian water” about this. They will answer you with details. I am sure water is healthy.

Petya (I): Is there time when they don't receive water?

Mrs Yotova: There is always water except moments when water company has breakdown.

I searched for information about the properties of the water which emigrants received in the website of „Sofian water”. According to this information I made this table:

Indicator	Unit	Permissible value	Average value
pH	pH	6,50 - 9,50	7,41
Natrium	mg/l	200,00	<5,10
Calcium	mg/l	150,00	<12,50
Iron	mg/l	200	<128
Manganese	mg/l	50	<10
Fluorides	mg/l	1,50	<0,20
Nitrates	mg/l	50,00	<0,99
Nitrites	mg/l	0,500	<0,015
Residual chlorine	mg/l	0,30 - 0,40	<0,31

2. Charts

And a chart about emigrants in Bulgaria (I found it in Internet):

3. Analysis

Mrs Kalina Yotova answered me for 1 day and this was extremely fast. I couldn't talk to people from „Sofian water” so I had to search at their website for the properties of the water. I found the chart really easy on Internet but I have to made it on Microsoft Word because it was a picture on Internet.

4. Conclusion

According to me it's easy to find water when you are at the center. The conditions there are very good. They have everything which one person needs in his daily routine. But before to go to the center and to register yourself you have to buy water. But not everyone has money and Bulgarian currency. Because they come from the regions where there is war. And that's the reason some people don't have water. But at the center is different.
