

Best jobs for water lovers

Benas Ponetauskas, 8B

What is all this about?

There are some people who just LOVE water. And some of them want to spend more of their time with water. So here's a few jobs that are interesting and fun, and might just be the perfect career choice for you.

Aquarist

An aquarist is an animal care worker that works specifically with fish and other species that live in aquariums—think of aquarists like underwater zookeepers. They're responsible for aquarium maintenance, as well as feeding and monitoring the animals to ensure they are healthy.

Aquarists at work

Commercial diver

Commercial divers use scuba gear to do underwater work such as repairing, removing or installing equipment and structures, conducting tests and experiments, rigging explosives and photographing marine life.

Fisherman

People think of fishing as a relaxing activity, but it's a different story altogether when it's what you do for a living. This is a labor-intensive job, fishermen work with a crew to locate fish, set up fishing nets and traps and sort, pack and store their catches. When not catching fish, they're cleaning and maintaining the ship.

Hydrologist

As the name implies, hydrologists study everything about water, including its properties, distribution and movement through the atmosphere. Basically, hydrologists are charged with making sure there's enough water to support all life on earth for the long term. They look for ways to minimize environmental pollution, and use technology to forecast future floods, the spread of pollution and other events.

Lifeguard

This job ensures there's always a chair waiting for you—and it's far from the office. Lifeguards monitor pools, beaches and any other recreation areas with a body of water nearby to ensure safety rules are followed and to provide assistance when a rescue is necessary.

Ship captain

All aboard! Captains transport passengers or cargo across domestic and foreign waters and are responsible for the safety of everyone and everything onboard, supervision of the crew as well as overseeing ship maintenance.

Naval architect

Much like a traditional architect designs homes and other buildings, a naval architect designs and builds ships of all sizes. Once ships are constructed, naval architects often evaluate the ship's performance both at sea and in the dock, making changes as they see fit to ensure safety and to see that national and international standards are met.
